

# CREDIT CARD FINANCIAL ANALYSIS

Power BI & DAX Project

---

## 1. Project Name

Credit Card Financial Analysis Dashboard

---

## 2. Project Description

This project focuses on analyzing credit card financial data using Microsoft Power BI and DAX. The dashboard provides an interactive view of important financial metrics, customer behaviour, transactions, and revenue-related information.

The project helps transform raw financial data into meaningful visual insights that can support data-driven decision-making.

---

## 3. Project Objective

The main objectives of this project are:

- To analyze credit card financial data.
  - To understand customer and transaction patterns.
  - To analyze revenue and transaction-related trends.
  - To create interactive and informative dashboards.
  - To use DAX calculations for meaningful business metrics.
  - To present insights in an easy-to-understand visual format.
- 

## 4. Tools and Technologies Used

- Microsoft Power BI
- DAX (Data Analysis Expressions)
- Microsoft Excel
- Data Cleaning and Transformation
- Data Visualization

---

## 5. Methodology / Approach

The project was completed through the following steps:

### Step 1: Data Preparation

The available credit card financial data was reviewed and prepared for analysis.

### Step 2: Data Cleaning

The data was checked for missing values, inconsistencies, and formatting issues to make it suitable for analysis.

### Step 3: Data Transformation

The data was transformed and organized in Power BI to create a suitable data model for analysis.

### Step 4: DAX Calculations

DAX measures and calculations were created to analyze important financial metrics and generate meaningful insights.

### Step 5: Dashboard Creation

Interactive charts, cards, tables, and other Power BI visuals were created to present the analysis.

### Step 6: Analysis

The dashboard was used to understand trends and patterns in credit card transactions, revenue, and customer-related information.

---

## 6. Key Insights

The dashboard provides insights into:

- Overall credit card financial performance.
- Revenue and transaction trends.
- Customer-related financial patterns.
- Transaction activity.
- Key financial performance indicators.
- Comparison of different categories and segments.

- Trends that can help support business decisions.
- 

## **7. Dashboard Features**

The Power BI dashboard includes:

- Interactive visualizations.
  - KPI cards.
  - Charts and graphs.
  - Filters and slicers.
  - DAX-based calculations.
  - Customer and transaction analysis.
  - Financial performance analysis.
- 

## **8. Skills Demonstrated**

Through this project, I demonstrated my ability to:

- Work with financial datasets.
  - Clean and prepare data.
  - Create Power BI dashboards.
  - Use DAX for calculations.
  - Create interactive visualizations.
  - Analyse business data.
  - Present data-driven insights.
- 

## **9. Conclusion**

The Credit Card Financial Analysis Dashboard demonstrates how Power BI and DAX can be used to transform financial data into meaningful and interactive business insights.

The project provided practical experience in data preparation, data analysis, DAX calculations, dashboard development, and data visualization. The resulting dashboard makes it easier to understand financial and customer-related patterns and supports data-driven decision-making.

This project also helped strengthen my practical skills in Power BI, DAX, Excel, and business data analysis, which are important skills for a Data Analyst role.

## 11. Project Deliverables

The following files are included as part of the project submission:

- Power BI Dashboard
- Project Documentation
- GitHub Repository
- README.md
